

# HIGH YIELD MARKET

## INVESTMENT COMMENTARY & REVIEW

by Michael Yean

Fourth Quarter 2019

Spurred by the announcement of a Phase-I trade agreement between the U.S. and China, the Bloomberg Barclays U.S. High Yield Corporate Index (Index) generated a return of 2.61% during the fourth quarter. For the year, the Index produced a total return of 14.32%, propelled by the Fed pivot in early 2019.

During the fourth quarter, the BB-rated and B-rated cohorts posted gains of 2.45% and 2.61%, respectively, while CCC-rated credits produced a gain of 3.73%. For the year, however, the BB-rated and B-rated cohorts returned 15.51% and 14.80%, respectively, substantially outperforming CCC-rated credits, that gained 9.51%.

The Index option-adjusted spread (OAS) tightened 37 bps in the quarter to +336 bps, while the yield-to-worst (YTW) declined to 5.19% from 5.65%. By ratings, BB-rated credits now trade at an OAS of +182 bps and offer a YTW of 3.63%, B-rated credits at an OAS of +324 bps and 5.12% YTW, and CCC-rated credits and below at an OAS of +920 bps and 10.94% YTW. The average dollar price of the Index rose to \$101.23 at quarter end.

2019 was a strong year for the high yield credit market, rebounding from recessionary fears and a disappointing 2018 with double-digit gains. Historically, this type of bounce-back performance has been fairly typical following down years in high yield. What was extremely unusual, however, was the dramatic outperformance of higher quality credits. In the prior three decades, there has never been a year when the Index returned over 5% and CCC credits did not outperform BB credits on an absolute basis. On a risk-adjusted basis, the 2019 relative performance of CCC bonds versus their BB peers was the worst on record (Goldman Sachs). Market appetite for smaller or less liquid issuers was virtually non-existent for much of the year, and valuation alone

did not resonate with the market. On the other hand, perceived quality, lower rates and an overall “search-for-yield” environment provided ongoing demand for higher quality credits at ever tighter levels.

This up-in-quality trade has left the high yield market with a challenging setup for 2020. Although the overall balance of market risks remain to the downside, our base case calls for continued accommodative Fed policy and extended slow economic growth in the U.S. and globally, that in combination with supportive technicals and only a slight uptick in default rates, should result in a fairly constructive backdrop for credit. However, with most of the largest ratings cohort (BB) call-constrained and mathematically challenged to repeat last year’s performance, we anticipate the overall high yield market to generate positive but sub-coupon returns in 2020.

While the overall high yield market should see modest returns, we continue to favor single-B’s and also find significant opportunity and value in the CCC ratings cohort, given the price action witnessed the previous year and the historic spread dislocations across the ratings spectrum. Our focus in the CCC-rated category is to invest in bonds we believe would perform through a down-cycle and currently offer yields that overcompensate for the assumed risk. We believe our attention to these types of credits, along with a continued emphasis on small issues (which was also out of favor in 2019), will result in attractive, better-than-market returns. Outperformance in 2020 will likely be delivered by investing in true high yield.

Pacific Income Advisers, Inc. (PIA) is an autonomous investment management firm registered under the Investment Advisers Act of 1940. PIA manages a variety of fixed income, equity, and balanced assets for primarily United States clients. The information contained herein is based on internal research derived from various sources and does not purport to be statements of all material facts relating to the securities mentioned. Fund holdings and/or sector allocations are subject to change at any time and are not recommendations to buy or sell any security.

**The fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The statutory and summary prospectus contains this and other important information about the investment company, and it may be obtained by calling 800-251-1970 or visiting [www.PIAMutualFunds.com](http://www.PIAMutualFunds.com). Read it carefully before investing.**

**Mutual fund investing involves risk. Principal loss is possible. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. The Fund may invest in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks may increase for emerging markets. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. The Fund may invest in derivatives, which may involve risks greater than the risks presented by more traditional investments. The risk of owning an exchange-traded fund ("ETF") or mutual fund generally reflects the risks of owning the underlying securities that the ETF or mutual fund holds. It will also bear additional expenses, including operating expenses, brokerage costs and the potential duplication of management fees. These risks are fully disclosed in the Prospectus.**

Index performance is not indicative of Fund performance. It is not possible to invest directly in an index. For current standardized performance of the Fund, please visit [www.piamutualfunds.com](http://www.piamutualfunds.com) or call 310-393-1424.

Bloomberg Barclays U.S. Corporate High Yield Index covers the universe of fixed rate, non-investment grade debt. Eurobonds and debt issues from countries designated as emerging markets (e.g., Argentina, Brazil, Venezuela, etc.) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included. Original issue zeroes, step-up coupon structures, 144-As and pay-in-kind bonds (PIKs, as of October 1, 2009) are also included. The index includes both corporate and non-corporate sectors. The corporate sectors are Industrial, Utility, and Finance, which include both U.S. and non-U.S. corporations. The Yankee sector has been discontinued as of 7/1/00. The bonds in the former Yankee sector have not been removed from the index, but have been reclassified into other sectors. You cannot invest directly in an index.

The Barclays' Quality sectors discussed above use the following rating methodology. Securities that are rated by three rating agencies, will receive the middle of the three ratings. Securities that are rated by only two agencies will receive the lower of the two ratings. Securities rated by only one agency will receive that rating while securities not covered by any of the three agencies will receive a non-rated (NR) rating. Bond ratings start at Aaa (denoting the highest investment quality) and usually end at D (meaning payment is in default). In limited situations when the rating agency has not issued a formal rating, the rating agency will classify the security as non-rated (NR).

Option-adjusted spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return, which is adjusted to take into account an embedded option. Typically, an analyst uses the Treasury securities yield for the risk-free rate.

Basis point (bp)- A unit that is equal to 1/100th of 1%, and is used to denote the change in a financial instrument.

Yield to worst - the lowest potential yield that can be received on a bond without the issuer actually defaulting.

Default Rate - The rate of borrowers who fail to remain current on their loans. It is a critical piece of information used by lenders to determine their risk exposure and economists to evaluate the health of the overall economy.

Yield - the income return on an investment, such as the interest or dividends received from holding a particular security.

Spread - The difference in yields between two fixed-income securities with the same maturity, but originating from different investment sectors.
