

# HIGH YIELD MARKET

## INVESTMENT COMMENTARY & REVIEW

by Michael Yean

Third Quarter 2021

The High Yield market generated modest incremental gains in the third quarter of 2021, with the Bloomberg U.S. High Yield Corporate Index (Index) returning 0.89% during the quarter, increasing year-to-date total returns to 4.53%. The CCC-rated cohort reversed its recent outperformance trend by gaining 0.75% compared to 1.09% and 0.61% for the BB-rated and B-rated cohorts, respectively.

High Yield market spreads drifted higher from their second quarter lows, with option-adjusted spreads (OAS) widening 21 bps in the third quarter to +289 bps, while the yield-to-worst (YTW) rose to 4.04% from 3.75%. By ratings, BB-rated credits now trade at an OAS of +203 bps and offer a YTW of 3.18%, B-rated credits at an OAS of +327 bps and 4.47% YTW, and CCC-rated credits at an OAS of +524 bps and 6.26% YTW. The average dollar price of the Index declined to \$104.64 at quarter end.

Investors climbed a wall of worry during the third quarter, with no shortage of wide-ranging economic, corporate, political, and geopolitical concerns. Drama in Washington, missed interest payments by China's

Evergrande Group, global supply chain constraints, soaring natural gas prices in Europe, looming Fed taper, ongoing tension between inflation and rates, etc., all contributed to the modest sell-off in risk assets. Of course, the COVID-19 pandemic also continues to rage on.

However, as noted in previous commentary, we believe the high yield market is supported by sound credit fundamentals and anchored by a very low default rate. Aggregate high yield market gross leverage has now declined below pre-pandemic levels and interest coverage has risen above prior levels, with further improvement expected as economic activity continues to recover. The high yield default rate, including distressed exchanges, has declined to below 1%. Distressed bonds at a mere 0.8% of the high yield universe, indicate that the default rate should be expected to remain muted. With these broad pillars in place, we expect a solid positive final quarter to 2021.

Pacific Income Advisers, Inc. (PIA) is an autonomous investment management firm registered under the Investment Advisers Act of 1940. PIA manages a variety of fixed income, equity, and balanced assets for primarily United States clients. The information contained herein is based on internal research derived from various sources and does not purport to be statements of all material facts relating to the securities mentioned. Fund holdings and/or sector allocations are subject to change at any time and are not recommendations to buy or sell any security.

**The fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The statutory and summary prospectus contains this and other important information about the investment company, and it may be obtained by calling 800-251-1970 or visiting [www.PIAMutualFunds.com](http://www.PIAMutualFunds.com). Read it carefully before investing.**

**Mutual fund investing involves risk. Principal loss is possible. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. The Fund may invest in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks may increase for emerging markets. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. The Fund may invest in derivatives, which may involve risks greater than the risks presented by more traditional investments. The risk of owning an exchange-traded fund ("ETF") or mutual fund generally reflects the risks of owning the underlying securities that the ETF or mutual fund holds. It will also bear additional expenses, including operating expenses, brokerage costs and the potential duplication of management fees. These risks are fully disclosed in the Prospectus.**

Index performance is not indicative of Fund performance. It is not possible to invest directly in an index. For current standardized performance of the Fund, please visit [www.piamutualfunds.com](http://www.piamutualfunds.com) or call 310-393-1424.

Bloomberg U.S. Corporate High Yield Index covers the universe of fixed rate, non-investment grade debt. Eurobonds and debt issues from countries designated as emerging markets (e.g., Argentina, Brazil, Venezuela, etc.) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included. Original issue zeroes, step-up coupon structures, 144-As and pay-in-kind bonds (PIKs, as of October 1, 2009) are also included. The index includes both corporate and non-corporate sectors. The corporate sectors are Industrial, Utility, and Finance, which include both U.S. and non-U.S. corporations. The Yankee sector has been discontinued as of 7/1/00. The bonds in the former Yankee sector have not been removed from the index, but have been reclassified into other sectors. You cannot invest directly in an index.

Bond ratings provide the probability of an issuer defaulting based on the analysis of the issuer's financial condition and profit potential. Bond rating services are provided by credit rating agency currently registered as Nationally Recognized Statistical Rating Organizations ("NRSROs"). Bond ratings start at AAA (denoting the highest investment quality) and usually end at D. (meaning payment is in default). Securities not covered by any agency will receive a non-rated (NR) rating.

Option-adjusted spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return, which is adjusted to take into account an embedded option. Typically, an analyst uses the Treasury securities yield for the risk-free rate.

Basis point (bp)- A unit that is equal to 1/100th of 1%, and is used to denote the change in a financial instrument.

Spread - The difference in yields between two fixed-income securities with the same maturity, but originating from different investment sectors.

Yield to worst - the lowest potential yield that can be received on a bond without the issuer actually defaulting.

Default is the failure to repay a debt including interest or principal on a loan or security.

Distressed debt exchange - a company that is unable to pay its financial obligations can renegotiate the terms of its debt obligations with its creditors
